

EPL Express

Low latency, high speed global connectivity.

Network latency problems can easily interfere with some applications' performance and may impact website performance. Thus low latency, accurate real-time information and faster network communication are crucial for businesses for greater productivity and more efficient operations.

What is EPL Express?

Ethernet Private Line Express provides customers with low latency connectivity between international financial capitals in Asia Pacific and the Americas, all backed by industry - leading service level agreements.

If gaining an edge with every speed advantage in trading or speed to market makes a significant impact to your bottom line and performance, then it is time to consider Telstra's EPL Express.

EPL Express has significant benefits to offer financial organisations and high frequency trading organisations that need reliable, high speed global connectivity for their mission critical operational backbone as the cornerstone of their business's success.

Benefits

Reduced risk for global organisations

When the speed and performance of a global network have a pivotal impact on your revenues, you cannot afford to take unnecessary risks. Telstra, through EPL Express, helps you mitigate these risks by offering low latency, comprehensive Service Level Agreements (SLAs), and low Round Trip Delay (RTD) – a safer option for businesses operating in diverse geographies.

Delivers sustainable business growth

Telstra is well positioned to support your needs wherever your business takes you, or whenever you are ready to expand.

EPL Express is available on key routes between the world's major financial capitals. This service is highly scalable and can handle the rapidly changing bandwidth demands characteristic of high-frequency financial trading and cloud-based services.

With our monitoring and management capabilities, we can provide visibility of your current demands and facilitate your future service planning.

Strong Asia Pacific presence

The Asia Pacific region is a major growth area for high-frequency algorithmic trading and also a region in which Telstra has been operating for the last 30 years. With our extensive local experience, capabilities and infrastructure, Telstra can both help you tap into new opportunities to increase your revenue and support your own expansion.

100% Onnet Experience

EPL Express is provisioned end to end on Telstra's network thus ensuring a single point of accountability for service management. With our advanced diagnostics capabilities, we are able to provide excellent post service support complemented by our local teams to take care of you in every step of your journey.

Features

Low latency

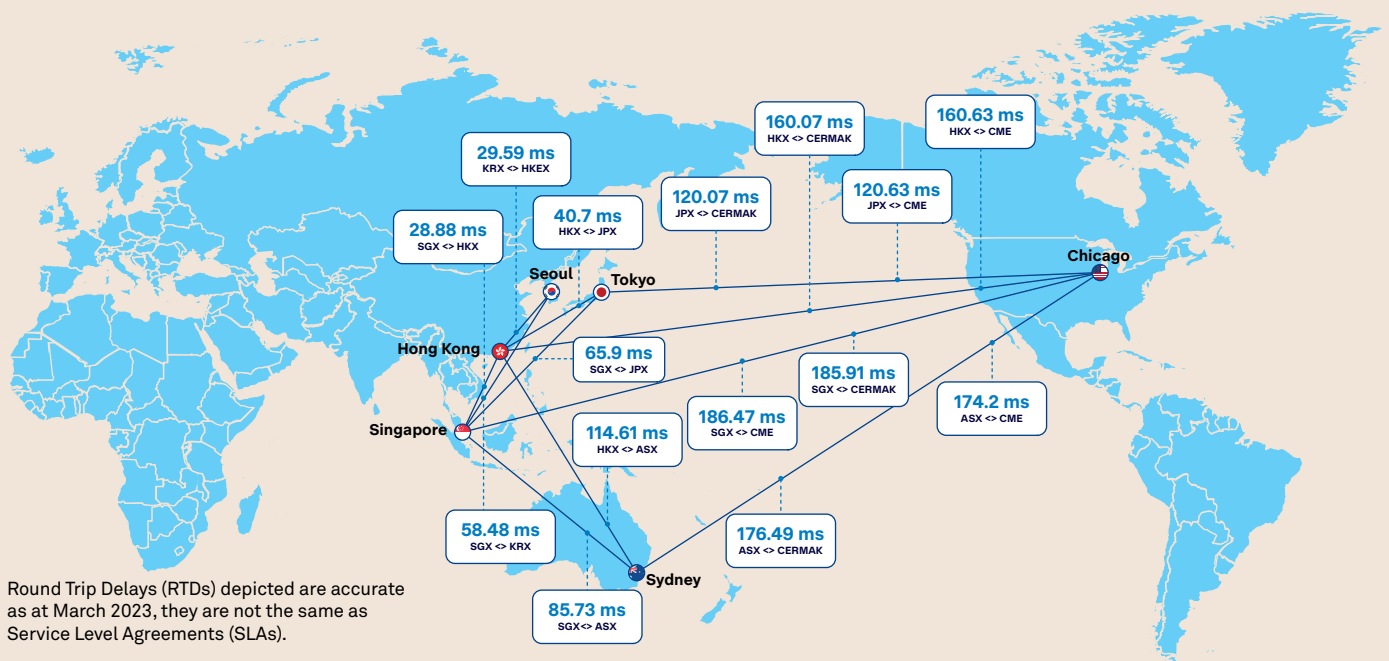

- Site-to-site low latency on every circuit.
- Stringent Service Levels Agreements (SLAs).
- Service availability via protocol transparent links that are provisioned end to end on Telstra's network.

Site-to-site management

Gain clear site-to-site network performance visibility along with diagnostics capabilities.

Choice of bandwidth levels

Select the speed that best matches your business requirements.
