Applications Capabilities

Our goal is to develop working software, that meets the customer, users' & business's needs, developed professionally; and in an effective & scalable manner. Clearer. Faster. Simpler.
Our Applications Capabilities

Application Modernisation

An approach designed to create new business values from aging applications by updating them with modern features.

By migrating into a modern architecture, you get the latest functionalities that better align with unique business needs

Digital Transformation / New Applications

The journey starts by discovering the digital transformation opportunities via design thinking workshops and user research. Then we define and design the service to meet the user needs. Interactive prototypes are built in interaction design phase and put in-front of users for testing. These are the foundation to the rebuild or new build of an application.
DevOps

DevOps is a mindset shift involving the union of people, process and products to enable continuous delivery of value to end users.

Digitise the critical, revenue generating business processes that are the heartbeat of the business

***Cloud Capability**

Benefits

Agile Delivery with Multi-disciplined teams
Enable multiple teams to contribute and enhance the user journey and overall experience to push changes quickly to production enabling innovation and speed to market

Cloud Native
Cloud based approach and delivery lets the technology do the heavy lifting and improve the accessibility

Business

Product

Design   Dev

Scalable
The capability to automatically scale based on the business requirements leading to a flexible way of delivering

Cost Efficiency
Able to deliver and do more with less and faster time to gain business value with improved release cycles, less rework and waste

Case Studies

Adopt secure and cloud-based DevOps framework (DevOps)

Problem: Client needed a cloud-based solution that allowed them to connect to real live data, ensure it was secure, have a framework of governance around it and could be done quickly at minimal expense

Solution: Provided pre-sales consulting ahead of our engagement that provided the client with "best practice" DevOps adoption and governance processes for both Azure and AWS platforms.

Outcomes: Adoption & governance, scalability, cloud based

Modernise legacy open source applications (Application Modernisation and DevOps)

Problem: Client was already familiar with Public Cloud, and engaged with Telstra to modernise this legacy open source application, migrate it to the Southeast Asia Region

Solution: Containerized all the applications, and implement the CI/CD pipelines for each application using Azure DevOps tool

Outcomes: Cost efficiencies, streamlined processes, scalable cloud presence

Manual, paper-based process to fully digitized application (Digital Transformation and new Application Build)

Problem: The government agency client engaged Telstra Purple to digitize their manual, paper-based process for bail reporting across their jurisdiction

Solution: By defining and designing the digital application built for iPads at the agency's front counters enabling bailees to report and sign digitally

Outcomes: Reduce risk by notifying when a bailee fails to report, view reports easily, save time

Enhance Productivity and Throughput

**Offer –
Build Custom Web Parts on
SharePoint Online**

Modify the content, appearance, and behavior of your SharePoint sites by adopting best practices for minimized overheads and maximum device compatibility. Extend the value of SharePoint Online by creating feature rich extensions, via custom web parts, based on your business needs. This is a feature fully supported by Microsoft within SharePoint Online, ensuring the reliability and stability.

🕐 **Duration**	Four (4) weeks
🖥 **Format**	Development
📋 **Agenda**	›Create a detailed design plan which will giving a clear understanding of requirements ›Present the design plan to key stakeholders to ensure that all requirements are captured accurately ›Build the custom features using custom web parts ›Test the site functionality
♡ **What you'll get**	›Design plan showing the proposed custom web parts ›Custom web parts that meets your business requirement
Benefits	›Rapid prototyping style using agile development approach ›Microsoft best practices to ensure continuing operation ›Thorough testing

Why Telstra Purple?

Largest Australian-owned team of technology services professionals – 1500 experts across four countries specialising in network, cloud, security, collaboration, mobility, software, data and analytics, and design.

We're committed to collaboration. We bring the best people across our organisationtogether with yours to design, build and deliver outcome based solutions.

Built on a foundation of acquisitions we are a powerhouse of demonstrable experience and expertise.

We've built strong partnerships with industry leaders including Microsoft (Gold), Cisco (Gold), AWS, Fortinet and more.

Telstra Purple orchestrates purpose-built solutions, with people at the centre.
Bring us your opportunity. We're standing by to build and manage the solution.
