

Take your business beyond

Telstra International Satellite Services

Connect your business to the world with Telstra International and InfraCo's world-leading satellite infrastructure and unique APAC connectivity.

No matter where you plan to take your operations, we have the global infrastructure to get you there

45+ years of satellite experience

Access to over 400,000 km of subsea cable and more than 30 cable systems

24/7 monitoring and support

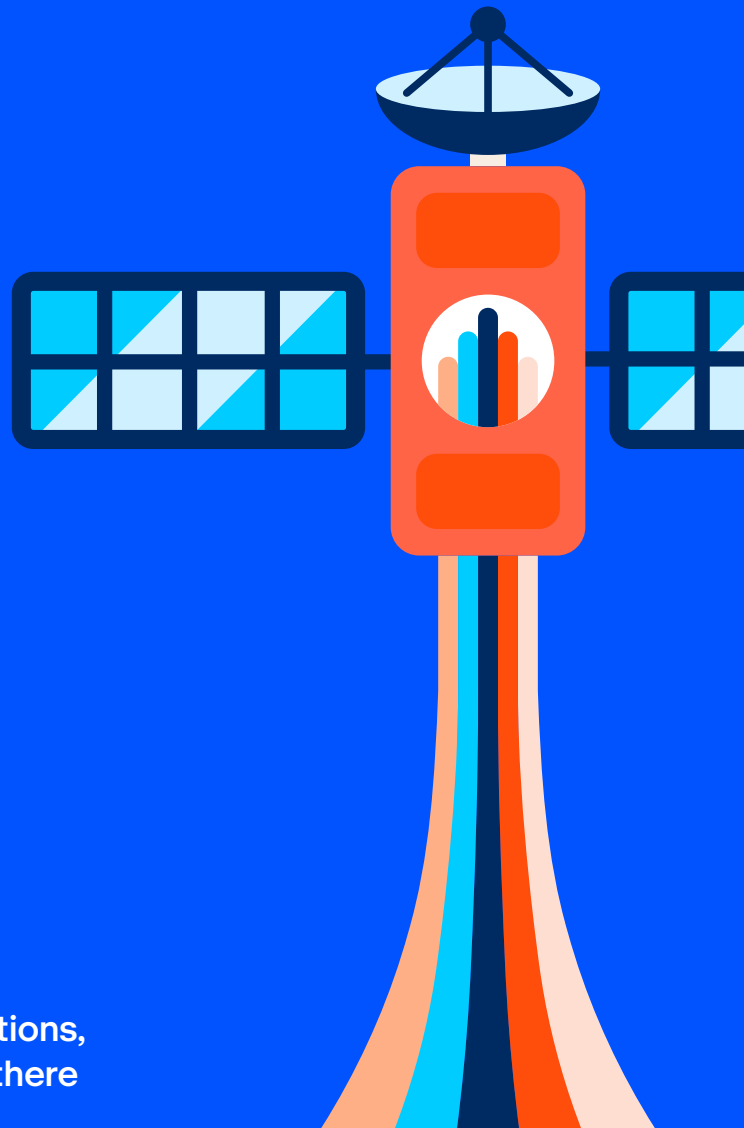

3 fully owned teleports with diverse fibre and IP connectivity

Access to over 60 C, Ku and Ka band satellites

Coverage over Atlantic Ocean Region (AOR), Indian Ocean Region (IOR) and Pacific Ocean Region (POR)

Engineered for resilience and global reach

With more than 45 years' experience in satellite teleport operations and the satellite services industry, Telstra International delivers satellite connectivity that's engineered for scale, resilience and reach. Access over 60 antennas from our world-class teleports in Australia and Asia.

Backed by Telstra InfraCo's infrastructure and our deep engineering expertise, our services are trusted by global carriers, hyperscalers and satellite operators. We offer unique ground station capabilities supported by subsea and backhaul connectivity to take your business global.

Global teleport infrastructure

Reach 60 antennas (2.4m–32m) from our three major teleports supporting uplink/downlink and turnaround services across multiple satellite bands (C, Ku, Ka).

Carrier-grade integration

Connect to our global terrestrial and subsea cable networks, including MPLS, Ethernet Private Line and IP Transit.

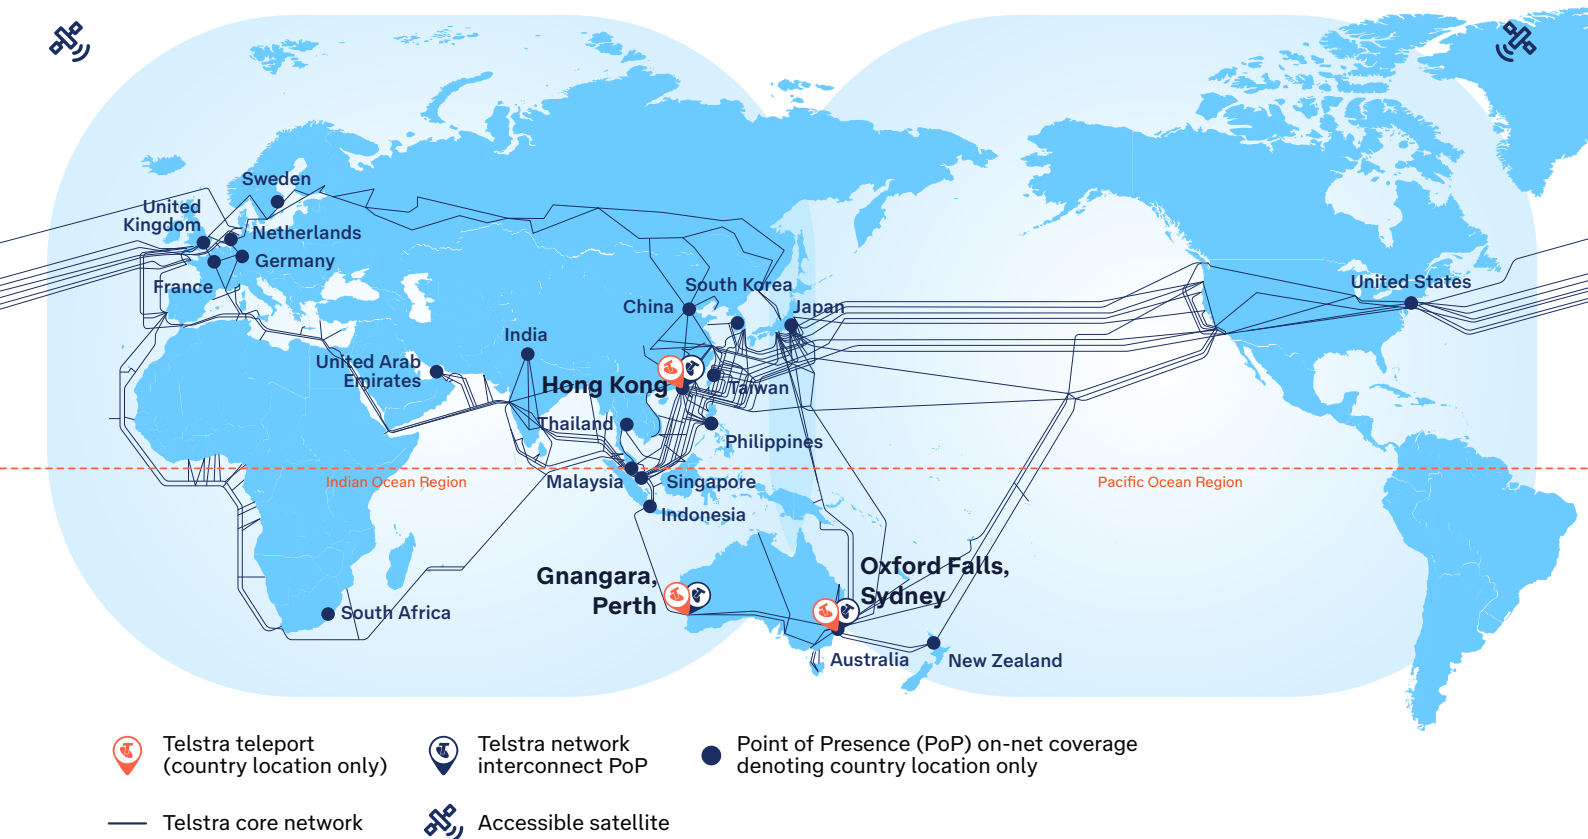

Build or colocate satellite ground stations your way

Rely on the support of Telstra InfraCo for site selection, construction and operations.

Your single point of contact for global reach

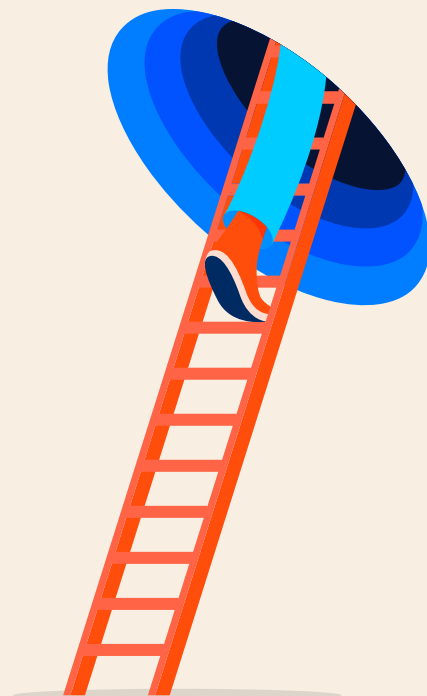

Simplify your operations with expert support and benefit from a unified service experience across teleport, terrestrial connectivity and satellite services.

Reach your customers, wherever they are

Connect your business to space and to the world

Whether you're expanding capacity across your footprint or seeking reliable access in new regions, our satellite infrastructure and services are here to meet your goals. You're supported at every stage by expertise from our 24/7 Network Operations Centre along with commercial support from a team who speak your language and understand the regulatory requirements.

Services	Features and capabilities
Teleports	<ul style="list-style-type: none">• Three world-class fully owned teleports: Sydney, Perth and Hong Kong• Reach 60 antennas (2.4m–32m)• Uplink, downlink and turnaround solutions• Fast, reliable access through Telstra's high-capacity subsea and terrestrial networks
Virtual Network Operations (VNO)	<ul style="list-style-type: none">• Manage VSAT networks without infrastructure investment• Scale your VNO bandwidth and carriers while managing your network remotely
Satellite telehousing	<ul style="list-style-type: none">• Colocate your equipment within our three world-class fully owned teleports• Floor space and rack space options available to colocate equipment• Telehousing services connect easily to our extensive terrestrial networks
Satellite ground station services	<ul style="list-style-type: none">• Design and build your satellite ground station infrastructure your way• Choose a greenfield site or colocate at any of Telstra's 7,000+ fixed network or teleport facilities in Australia to deploy satellite ground stations, and leverage our expertise in site acquisition, project management, construction and maintenance• Ground stations with fibre connectivity, indoor space, security and backup power• Power resilience backup configurations: mains, generator, UPS, off-grid solar and batteries, scalable to 250 kW• Some of the standards you can apply to your sites include: ASIO, PSPF, DISP, ISO, SOC 2, PCI DSS and ASHRAE• CCTV, access control and fire protection standards
Connectivity options	<ul style="list-style-type: none">• A range of terrestrial connectivity services to help your business to achieve global reach• MPLS, Ethernet Private Line (International), Global Internet and IP Transit• Intercity Wavelength and Intercity Dark Fibre (in Australia)

Build your satellite ground station infrastructure with confidence

With decades of engineering expertise, Telstra InfraCo delivers trusted support to ensure every project meets the highest standards for safety, quality and efficiency.

Choose

Leverage our expertise to assess your needs and determine suitable locations, whether from our existing sites or other sites that we can help secure and prepare. Set up your operations with peace of mind, with clear cost forecasts and access to essential power and connectivity.

Build

Co-design and co-build infrastructure with the best in the field. We partner with trusted suppliers to streamline procurement and construction while ensuring compliance, safety and sustainability, keeping you informed at every step.

Run

We provide comprehensive site management and maintenance to maximise performance and uptime, offering operational support for climate control, power, and connectivity backup. Our team conducts regular, proactive equipment maintenance to enhance longevity, all in compliance with Australian standards and local safety regulations.

Access a range of satellites globally with our geographically diverse, fully owned teleports
